SKILLS

Programming Languages: JavaScript, TypeScript, Basic of Python and Java

Tools & Technologies: Node.js, React.js, Next.js, HTML5, CSS3, Tailwind CSS, Redux Toolkit, React Context API, ShadCN, Material-UI, Bootstrap, Daisy UI, RESTful APIs, Git, GitHub, Vercel, Netlify, Docker, VPS, AWS, Figma, Jest, React Testing Library

EXPERIENCE

PHYSICS WALLAH (PW SKILLS)

Bangalore, Karnataka

Associate

Oct 2023 - present

Designed a full-stack web development curriculum with practical projects and quality lectures. Collaborated with the design team to enhance the learning experience and integrated Sphere Engine into the LMS. Developed responsive React interfaces, optimizing performance and reusability.

INEURON.AI

Bangalore, Karnataka

Associate

Feb 2023 - Oct 2023

Developed a MERN stack curriculum with practical projects to enhance student learning. Provided support to clarify doubts and collaborated on capstone projects integrating key skills. Designed and built responsive frontend interfaces using React, ensuring seamless user experiences and improving application performance.

EDUCATION

Manipur University

B.E. in Computer Science and Engineering

Relevant Coursework: Object-Oriented Programming, Databases, Discrete Mathematics, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Software Engineering, Web Development, Cloud Computing, Artificial Intelligence, Cryptography, Compiler Design

PROJECT WORKS

- **Crypto Web Page:** Crypto Tracker is a web application built with React, TypeScript, and Vite that allows users to track cryptocurrency prices and details. It fetches data from the CoinGecko API and optimizes performance using caching with React Query and lazy loading in React, ensuring a smooth and efficient user experience.
- **Language Translator Application:** Developed a React application utilizing the Memory translation API provided by Translated Labs. This app translates text between multiple languages and provide a user-friendly interface.
- **Pizza application:** Built a full-featured pizza ordering app using the MERN stack (MongoDB, Express, React, Node.js). Designed and developed both the frontend and backend, ensuring mobile responsiveness to deliver a seamless user experience across various devices
- **Note-Keeping App:** Built a full stack application similar to Google Keep. This project will involve creating a web application that allows users to take, organize, and manage notes efficiently. created with the MERN stack technology

AWARDS AND ACHIEVEMENTS

- Outstanding Performance Award - PW Skills Web Development Team
- AWS Cloud Practitioner
- Complete web Development Bootcamp by Udemy (Angela Yu as Mentor)
- Full Stack Development Co-hort by 100xdevs (Harkirat Singh as Mentor)

HOBBIES

- Photography
- Watching Movies
- Reading Books
- Traveling
